

			<p>A total eclipse of the moon is also called a blood moon.</p>
<p>total eclipse</p>	<p>partial eclipse</p>	<p>eclipse alignment</p>	<p>blood moon</p>

<p>A blue moon is the second full moon in a month.</p>	<p>A supermoon is when the moon appears larger because it is closer to the earth.</p>	<p>The moon can appear red, yellow or brown when it passes into the earth's shadow.</p>	<p>When the earth is between the sun and moon, we can still see the moon because light refracted in the earth's atmosphere shines on the moon.</p>
